

Solar Cooking in Omdurman

On the edge of Khartoum in the area of North Omdurman we found many thousands of IDPs. They came from not only Darfur but from the Nuba Mountains as well as from others parts of Sudan. These are often the ones who are forgotten by the NGO groups giving help and assistance. They too have to scrounge for a means to cook their food. Often they have to buy charcoal or propane gas to do this as firewood is not available. Every week at least 5-6 Sudanese Pounds are spent to cook the meager food supply. When asked what kinds of food they normally eat the reply was: “ There isn’t any food that is normal, its rather whatever food is available.”

This group of IDP were overjoyed at the solar cooker training we gave. We sent them out to buy pots, paint and glue for their own cooking efforts. This group has become the first group to reproduce themselves and the solar cooker effort in Khartoum.

2007 Group

2008 Group

Second generation of students and cookit style of solar cookers! This group is now starting to use the 3rd generation of cookit made from plastic
