

Many thousands of displaced people from Darfur also live in Khartoum the capitol of Sudan. This is also a very important area to introduce solar cooking. In February of 2008 we taught a group of men and women in the El Hajusif region of the city how to make and use solar cookers. One of the women students had been a refugee all the way in Iridimi camp in Chad. She had done solar cooking there with Kozon and was very anxious to get back into the solar cooking mode again. The sun shines with brutal intensity in Khartoum an the heat from the sunbaked homes makes us feel like we are already living in a huge solar oven!

# El Hajusif solar cooker group

Painting pots, spreading glue, attaching aluminum foil and cutting cardboard were all part of the training . Instruction and teaching on the principles of solar cooking were all a part of the two day event.

Preparing food to eat and tea to drink makes solar cooking a satisfying event. But even more so when we are helping to protect the environment and the people who live in it.
